Il periodo preso in esame è normalmente critico per la qualità dell'aria relativamente agli inquinanti fotochimici (O<sub>3</sub>). Nonostante ciò presso il laboratorio mobile non si sono osservati superamenti dei limiti della attuale normativa.

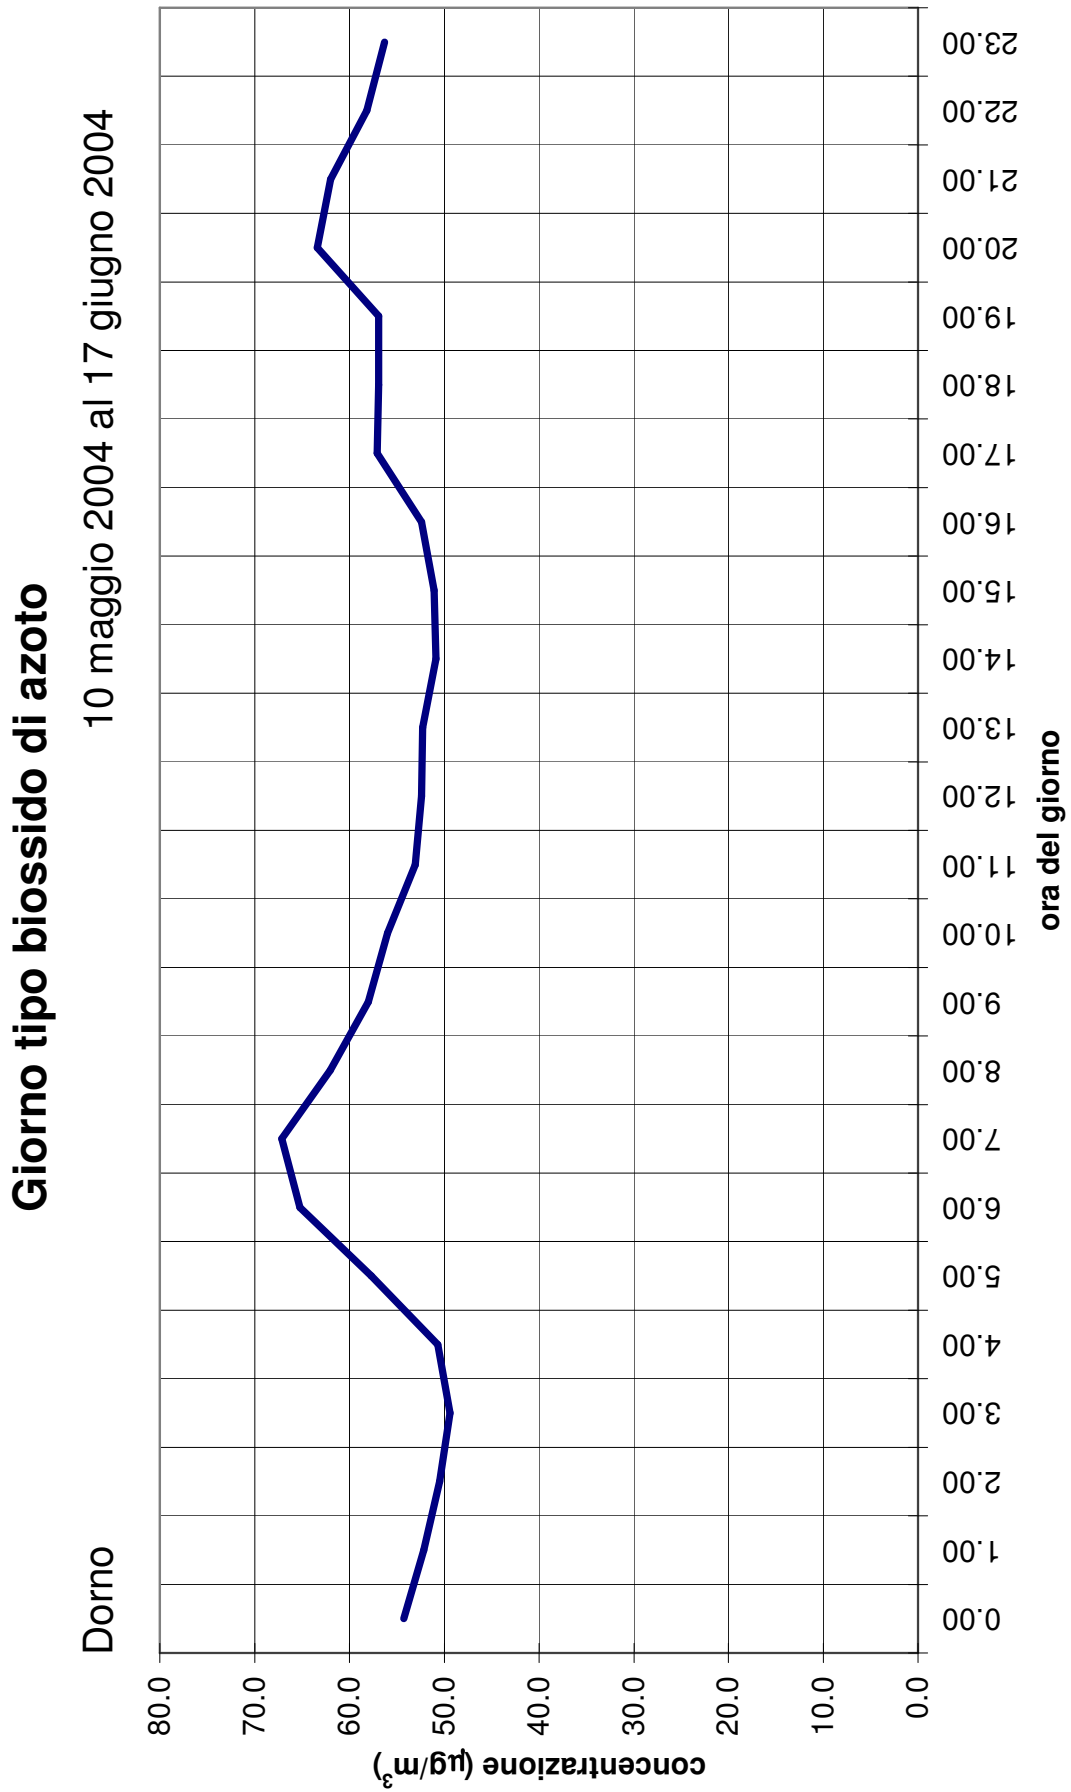

Confrontando i dati di Dorno con i dati rilevati presso le centraline fisse della rete provinciale si osserva che il biossido di azoto, il monossido di carbonio e il benzene, pur considerando la vicinanza del punto di prelievo all'arteria trafficata, sono analoghi a quelli misurati presso le centraline fisse di Pavia.

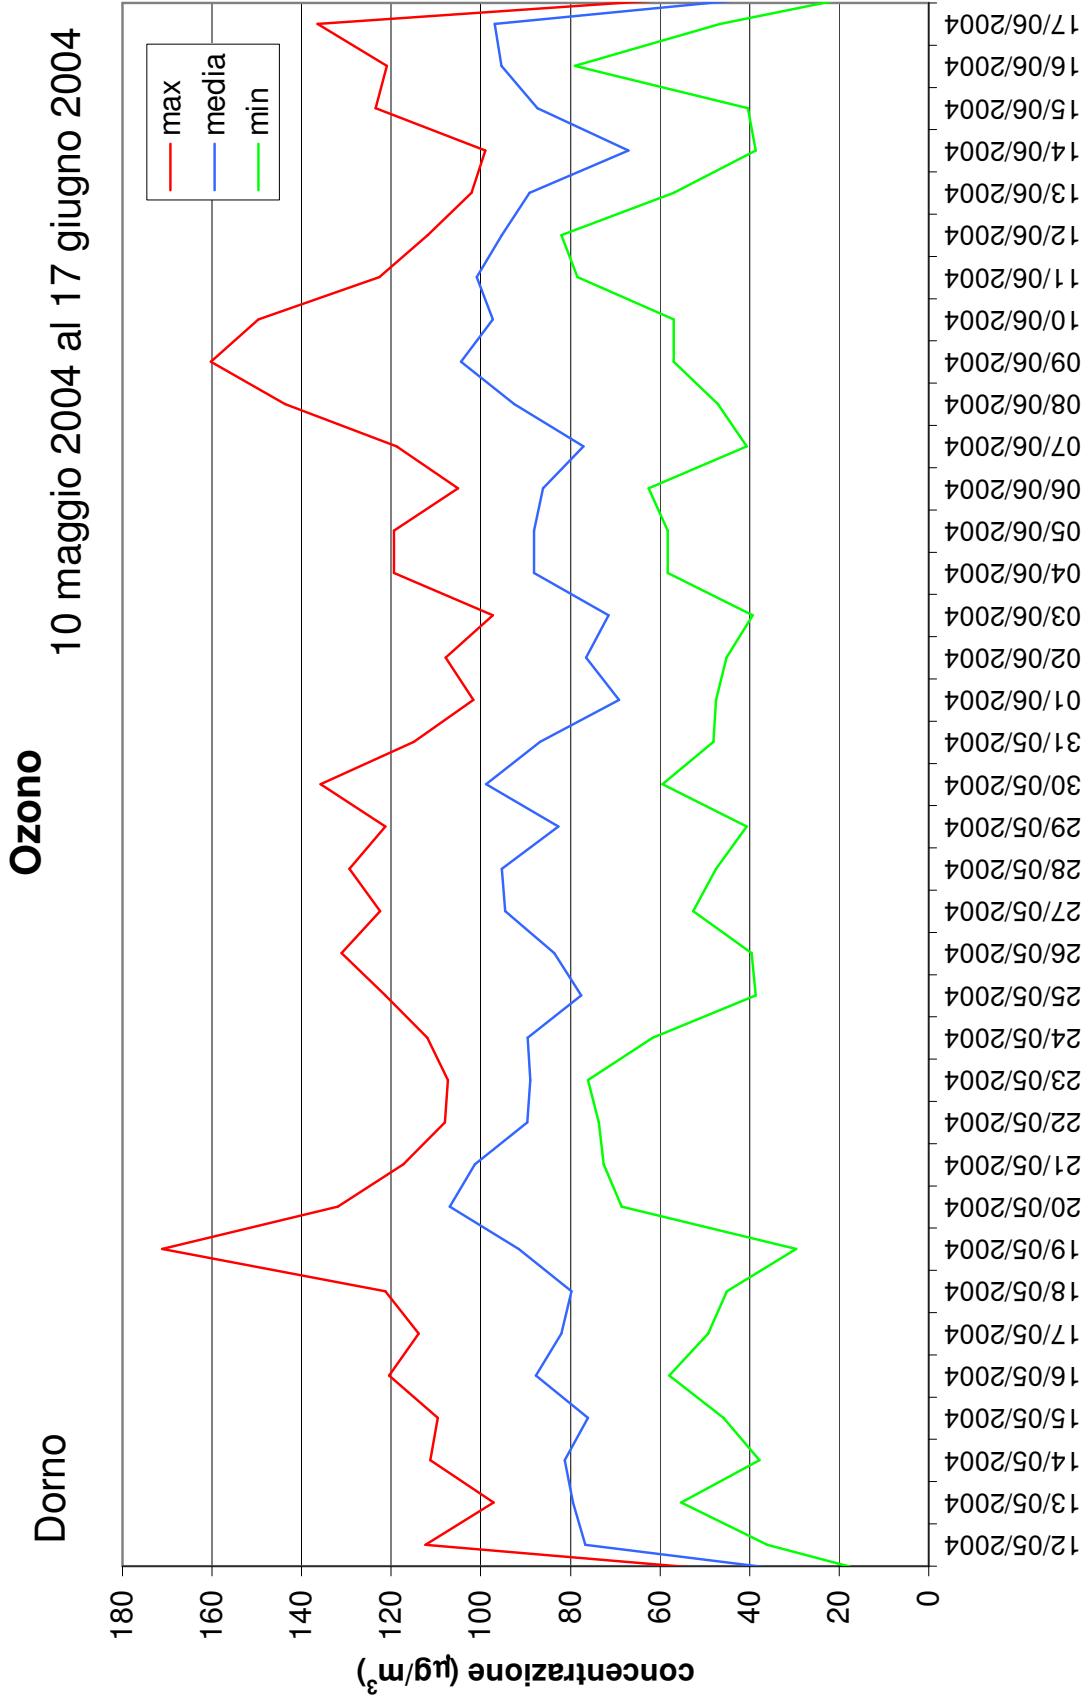

Responsabile del Procedimento
